

LED LAMP TUBE

ABSTRACT OF THE DISCLOSURE

A LED lamp tube is constructed to include a light-guide
5 shade and a light source mounted inside the light-guide shade, the
light-guide shade having a light guide layer, two mounting portions
extended from the light guide layer at two sides for mounting, and
protruding portions arranged inside the light guide layer and
defining a respective light guiding groove for producing a
10 respective luminous arc when radiated with light, the light source
being a circuit board holding a plurality of light emitting diodes
that are controlled to emit light onto the light guiding grooves of
the protruding portions to further produce luminous arcs.
